

Project Design Phase
Proposed Solution Template

Date	18 JULY 2026
Team ID	
Project Name	A Comprehensive Measure of Well - being
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No. Parameter Description

1	Problem Statement (Problem to be solved)	Users face difficulty in analyzing and comparing the Human Development Index (HDI) of different countries because the required indicators such as life expectancy, education, and income are scattered across multiple sources and require manual analysis.
2	Idea / Solution Description	Develop a web-based Human Development Index (HDI) Predictor using Python, Flask, and Machine Learning. The application allows users to select a country, retrieves its development indicators from the dataset, predicts the HDI score using a Linear Regression model, and displays the HDI category in a simple and user-friendly interface.
3	Novelty / Uniqueness	The solution combines Machine Learning with an interactive web application to provide instant HDI prediction and visualization. It simplifies complex socio-economic analysis into an easy-to-use platform without requiring manual calculations.
4	Social Impact / Customer Satisfaction	The application helps students, researchers, policymakers, and organizations understand and compare the development status of countries quickly. It promotes awareness of human development and supports informed decision-making through accurate predictions.
5	Business Model (Revenue Model)	The application can be offered as a free educational platform with premium analytical features for organizations and research institutions. Revenue can also be generated through institutional subscriptions, API integration, consulting services, or educational partnerships.
6	Scalability of the Solution	The solution is scalable and can be extended by integrating real-time datasets, supporting more countries and development indicators, deploying on cloud platforms, adding interactive dashboards, and incorporating advanced machine learning models for improved prediction accuracy.
